5.6 Class Photo-Manager	11
5.7 Class GUI	11
5.8 Class Data Repository	11

# 1. Overview

After detailed case study, following are the basic classes and actions that emerge out:-

**Classes:** (Basic building blocks of SkyBar)

S.N.	Class	Responsibility
1	Upload	Add photos to the database for further use of the user.
2	Dashboard	Show the particular items for that domain.
3	Download	Download the photo for the user in their system with a specific extension.
4	Security	It will manage full privacy and keep the users data safe and secure with us, rather than allowing others to access that. (No other users can access others data)
5	Sharing	Manage functionality of sharing data with multiple users.
6	Photo-Manager	Manage sorting, editing and settings.
7	GUI	Manage the Graphical User Interface.
8	Data Repository	Manage all the data of users. Work as a bridge in between the main modules and server.

**Note:** Other additional classes may get added during implementation.

**Actions:**

S.N.	Action
1	Add/Delete/Edit/Download Photo Dashboard/viewer
2	Select/Create/Delete/Share/Remove/Rename
3	Raise/Send/Delete Alerts
4	Validate user
5	Process/Save Image

## 2. Inheritance Structure:

There does not seem to be any inheritance structure because of the lack of commonality between the classes.

## 3. Aggregation :

The logical structure suggests the following aggregation between the classes.

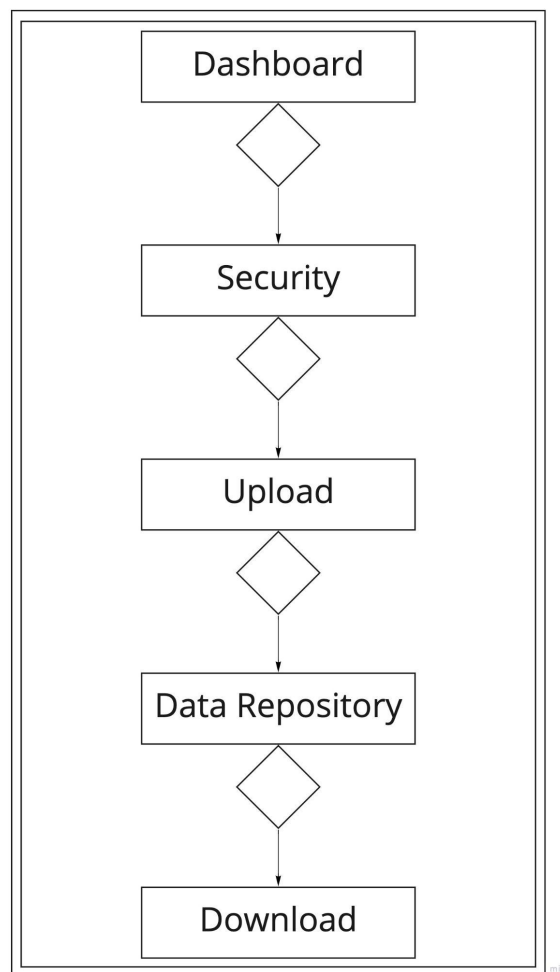

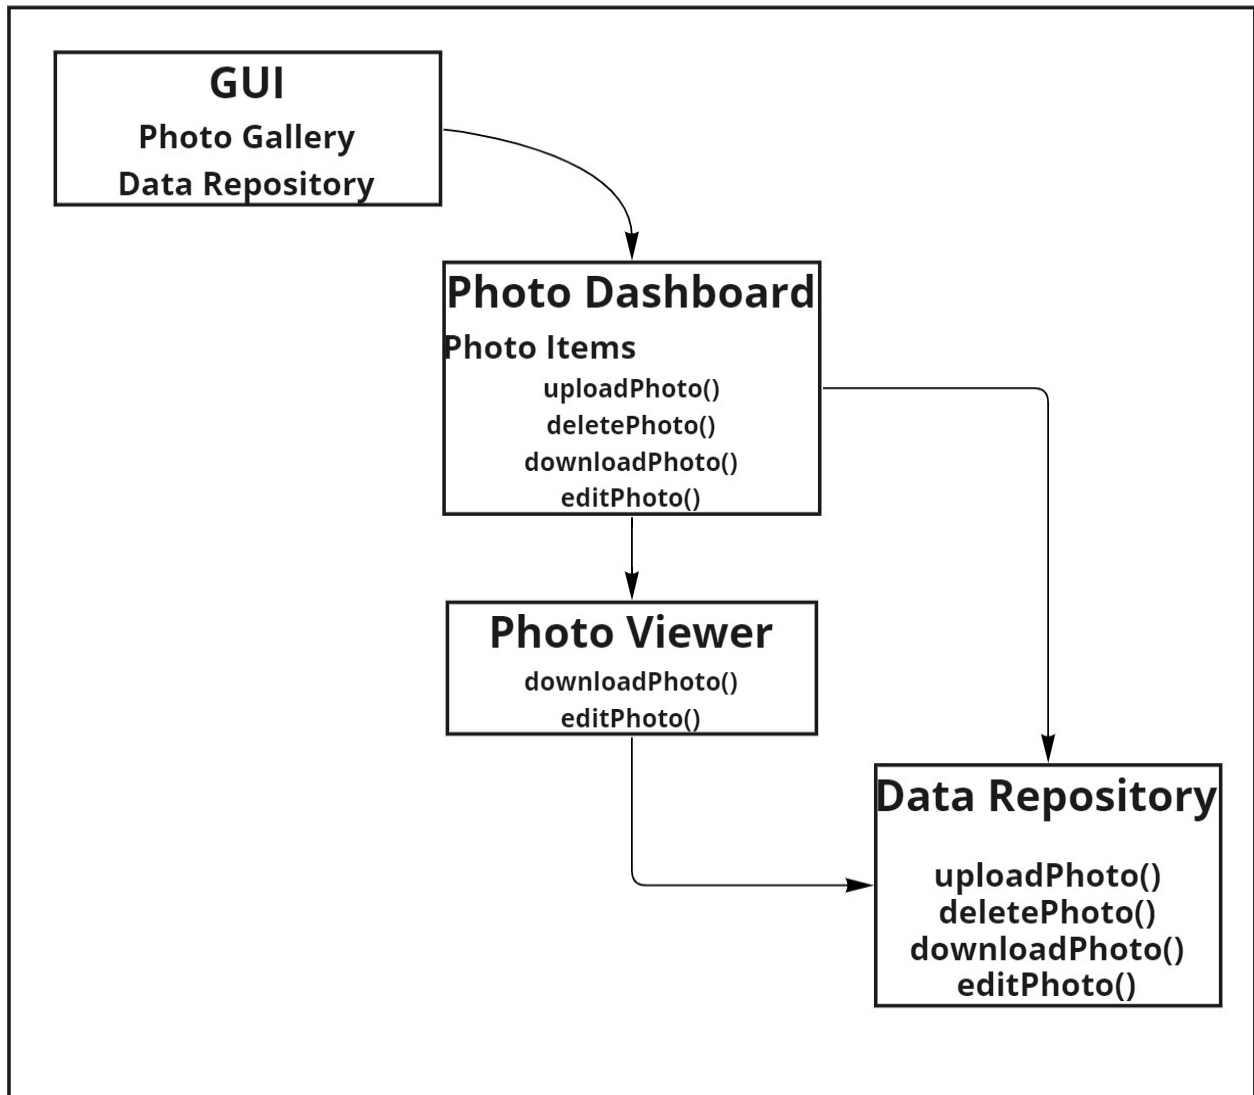

Fig-3

## 4. Association:

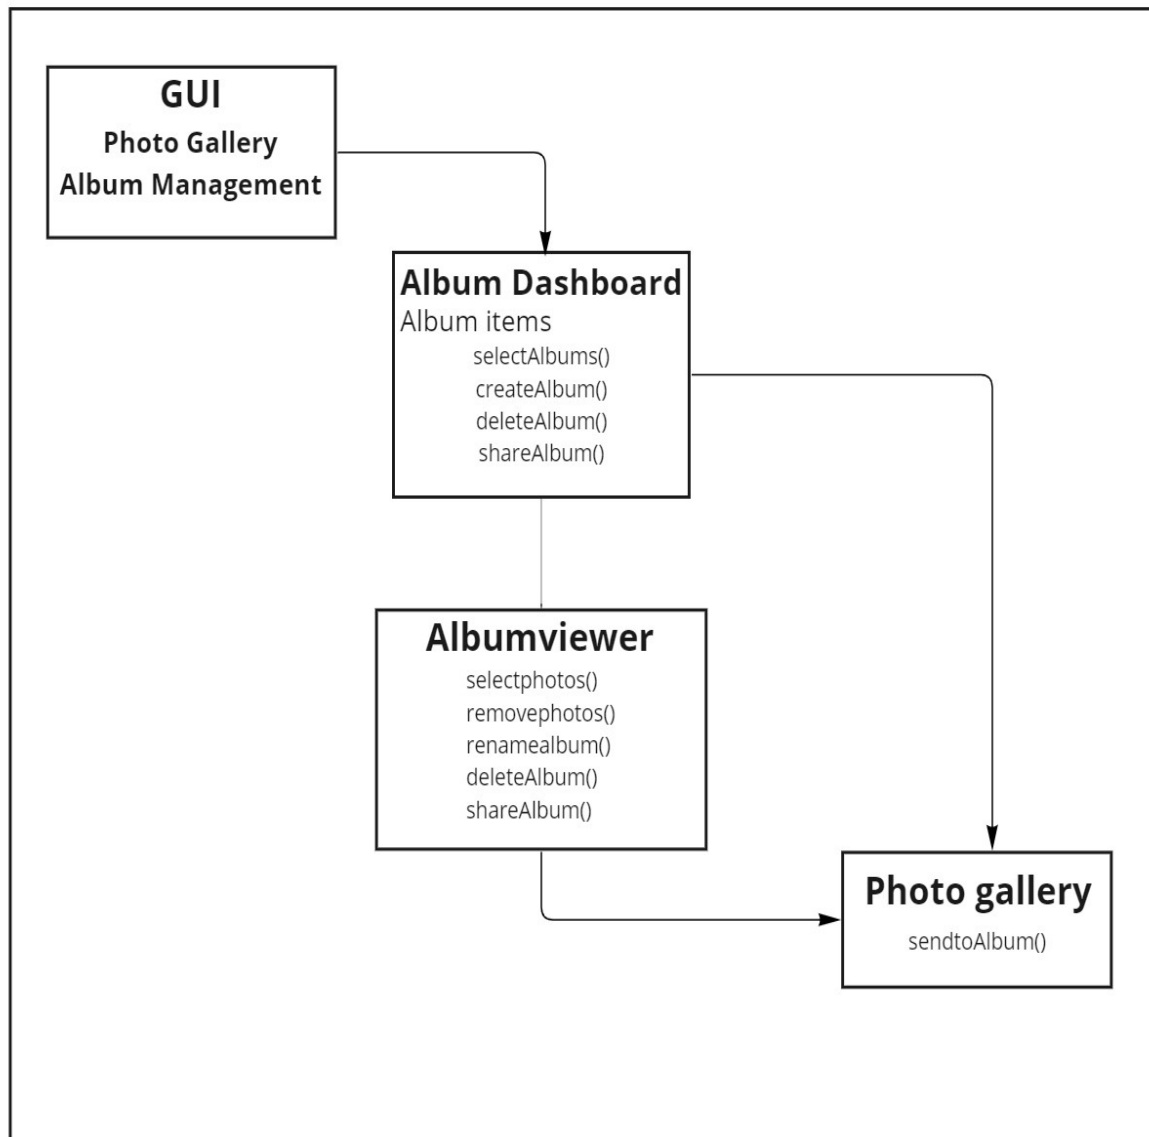

### 4.1 Principal Action

Association for action add/Delete/Edit/Download Photo Dashboard/Viewer

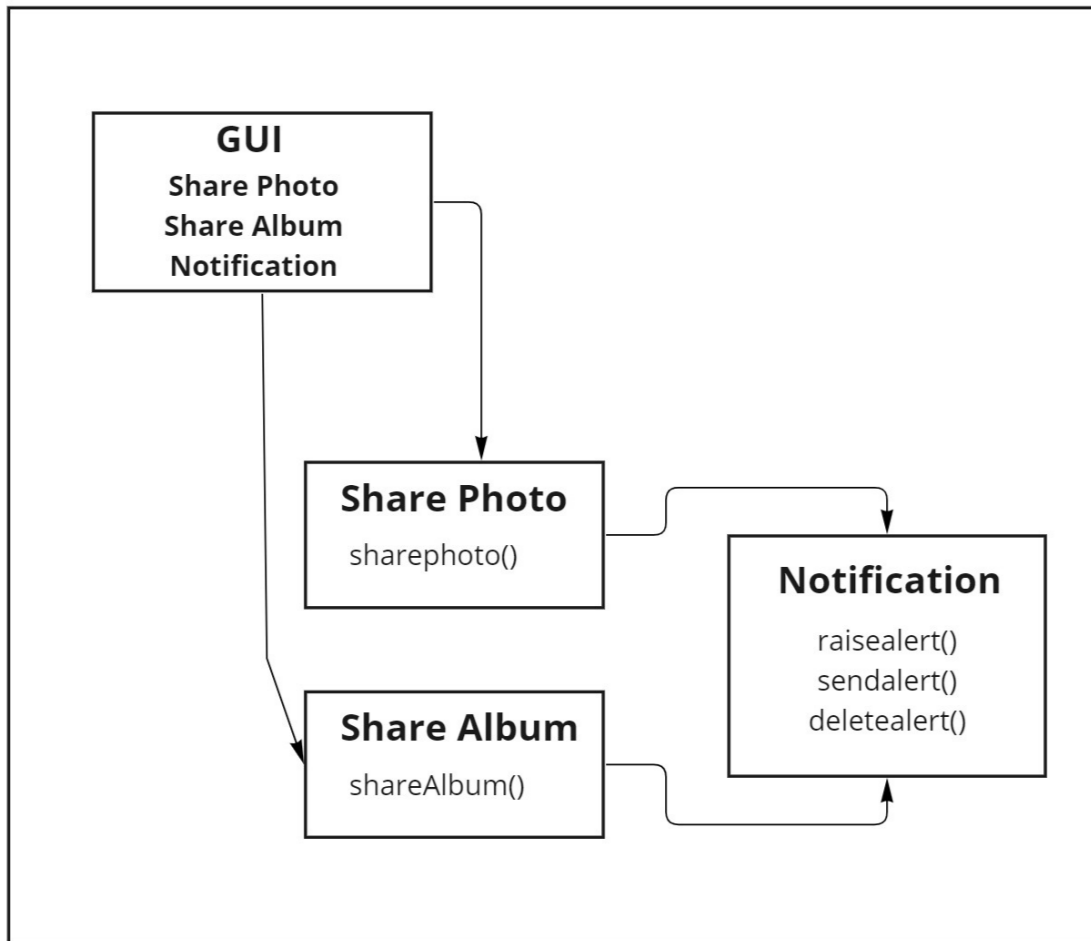

## 4.2 Principal Action

### Association for action Select/Create/Delete/Share/Remove/Rename

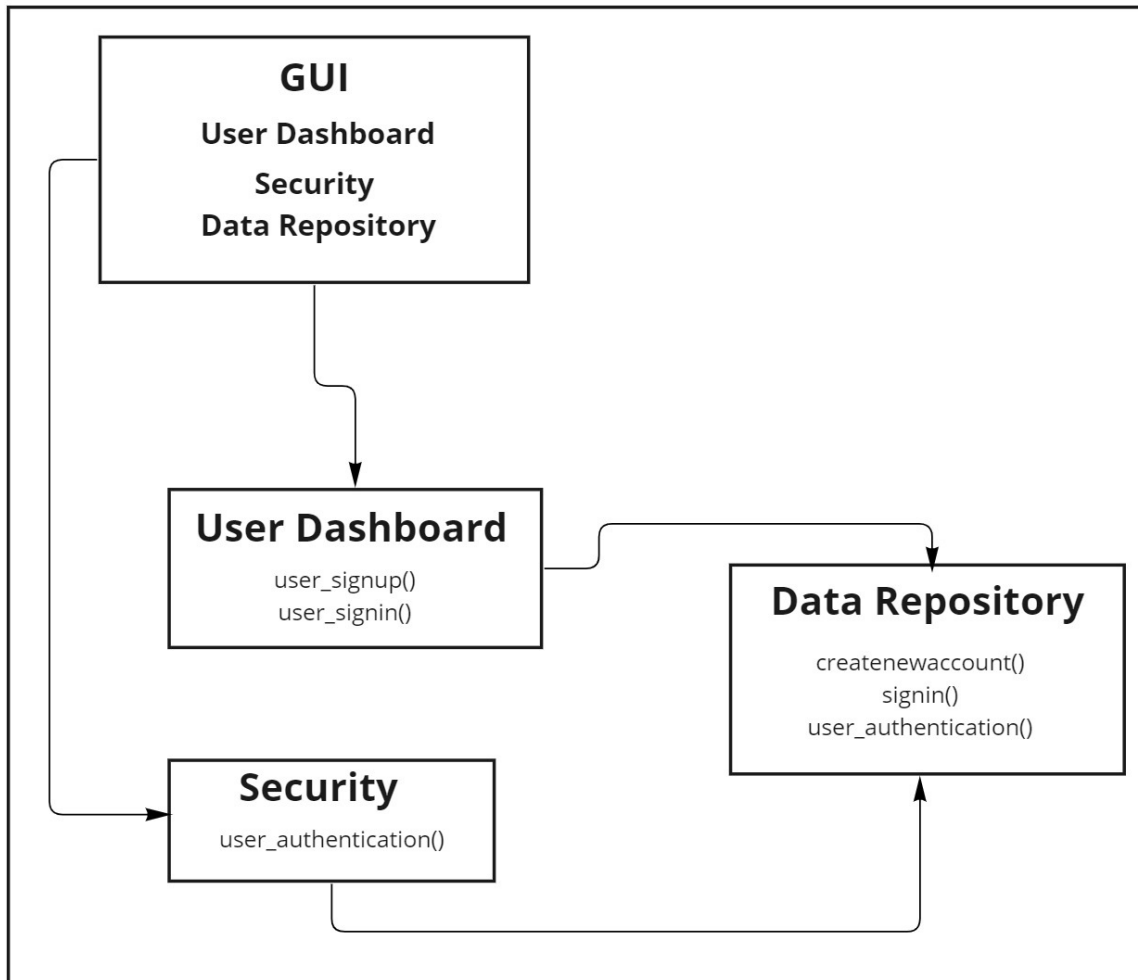

### 4.3 Principal Action

#### Association for action Raise/Send/Delete Alerts

## 4.4 Principal Action

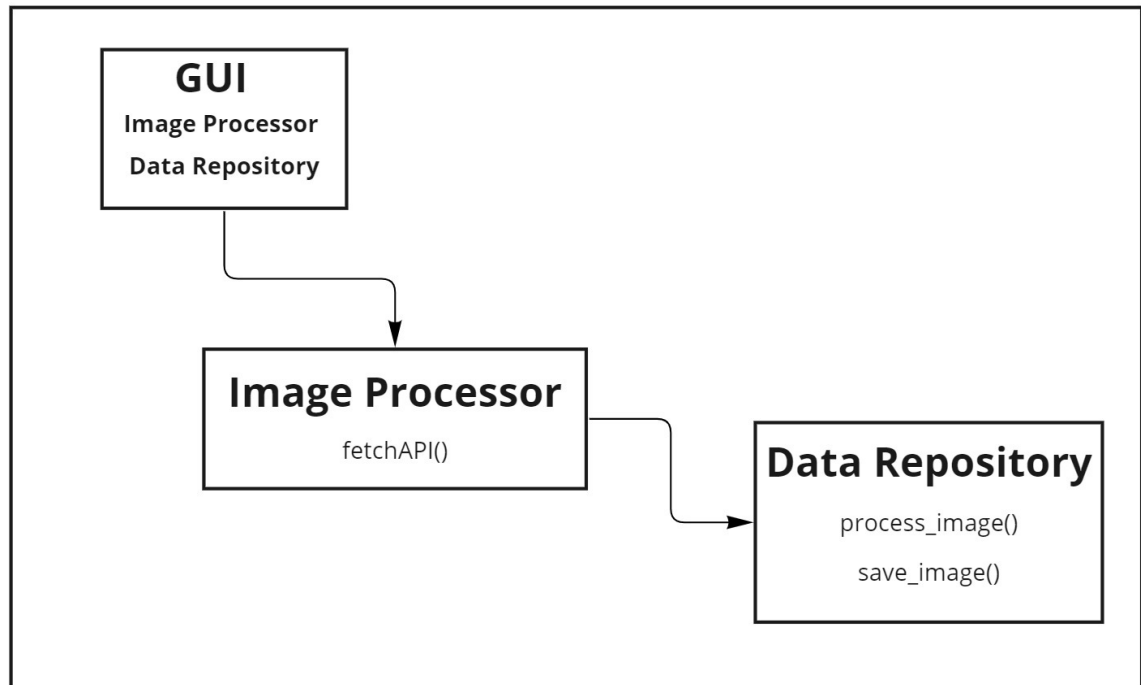

### Association for action Validate user

## 4.5 Principal Action

### Association for action Process/save Image

## 5. Detail Design Specification:

It consists of a list of main classes and their attributes and methods with proper comments.

### 5.1 Class Upload

**//method//**

GET //using the HTML form.

## 5.2 Class Dashboard

### **//attributes//**

Dashboard Objects //JSON of all items on dashboard

Username // Current session user stats

### **//methods//**

displayItems() //display the required items from DOM

getUser() //get user data from current session

## 5.3 Class Download

### **//methods//**

POST // post using app.post included in nodejs

## 5.4 Class Security

### **//attributes//**

String username: //username of the application user is  
stored

String Password: //the respective password of the  
application user

### **//methods//**

boolean UserValidation(String username, String Password);

//user validation for personal security of individual users

boolean changePassword(String oldPassword, String  
newPassword,String RetypePassword);

//to change or modify the password of the validated users.

## 5.5 Class Sharing

### **//attributes//**

Sender //owner of the picture

Receiver // the person to whom we share the image

### **//methods//**

userMange() //Send sender image to receiver data segment

## 5.6 Class Photo-Manager

**//methods//**

sortPhoto() //Sorting of the photo

add\_a\_task() //add a image

delete\_a\_task() //delete a image

extension\_changer() //Change the image extension using API

## 5.7 Class GUI

**//attributes//**

Dashboard //Object of the dashboard class

PhotoManager // Object of Photo manager class

DataRepository // Object of the DataRepository Class

SecureLogin // Object of the Security Class

**//methods//**

void createGUI() //creates the Graphical User Interface

## 5.8 Class Data Repository

**//methods//**

getData() // Get data from server

sendData() // Send data to the server

save\_image() // Save data received from the server

find\_data() //find data requested by the server
